github.com/racstan

SUMMARY

Passionate and detail-oriented Computer Science graduate focused on building scalable and impactful software solutions. Skilled in full-stack web development with Laravel, React, TypeScript, cloud technologies, DevOps practices, and modern AI integrations. Strong interest in solving real-world problems through clean architecture, practical engineering, and continuous learning.

EDUCATION

B.Tech in Computer Science Engineering (AI and Robotics Specialization) Jul 2025
Vellore Institute of Technology, Chennai, Tamil Nadu CGPA: 8.24

Intermediate (TSBIE) Jul 2019
Sri Chaitanya Junior College, Hyderabad, Telangana Percentage: 79.7
Coursework: Physics, Chemistry, Mathematics (PCM)

Secondary School (CBSE) 2017
D.A.V. Public School, R.K. Puram, Hyderabad CGPA: 9.8

TECHNICAL SKILLS

Backend: PHP, Laravel, REST APIs, Node.js

Frontend: JavaScript, TypeScript, React.js, HTML5, CSS3, Tailwind CSS

Databases: MySQL, PostgreSQL, Firebase, ChromaDB

DevOps & Tools: Git, Docker, Linux, Postman

Cloud: AWS, Microsoft Azure, GCP

AI Technologies: Generative AI, LangChain, LangGraph **Certifications:** Azure AI Fundamentals (2024), GCP ML Fundamentals (2022), SFPC (2023), MySQL for BI (Udemy), IIT Bombay (Python, Java, C++)

EXPERIENCE

Data Science Intern Nov 2023
JPMC, Hyderabad

- Performed exploratory data analysis on Financial portfolio datasets to study correlations.
- Developed Python-based analysis workflows using the R language for the project.
- Improved the internal data processing pipeline and reporting format for the project.

Data Analytics Trainee Aug 2023
MedTourEasy, Remote

- Completed a 4-week industrial traineeship focused on data analytics, preprocessing, and data-driven decision making.
- Performed exploratory data analysis and cleaned structured datasets using Python, MySQL, Pandas, NumPy, and Scikit-learn.

- Created visual reports and trend analysis dashboards using Matplotlib and Seaborn for effective data interpretation.

SOFT SKILLS

- Strong problem-solving and analytical thinking with a focus on practical, data-driven decisions.
- High ownership and accountability in solo and team-based projects.
- Clear written and verbal communication, including documentation and technical explanations.
- Adaptability to new tools, frameworks, and domains.
- Discipline and emotional control in work.

ACADEMIC PROJECTS

ESP32 CAM Face Detection Door Lock System Jul 2024

- Implemented face detection for door-lock automation using ESP32-CAM and OpenCV.
- Designed secure access logic with remote monitoring.

EV Battery Management System Feb 2024

- Built a prototype BMS system to monitor battery status and manage charging efficiency.
- Used microcontrollers and sensor modules for real-time parameter tracking.

Smart Home Automation System Jul 2023

- Created IoT-based automation for lighting, temperature, and appliance control.
- Integrated WiFi modules for remote operation.

Obstacle-Avoiding Autonomous Vehicle Mar 2023

- Designed an autonomous car using ultrasonic sensors for dynamic obstacle detection.
- Implemented control logic for path correction and safe navigation.

RFID-Based Smart Access Control Feb 2023

- Developed RFID-based entry authentication with unique logging.
- Built microcontroller-based logic for access and alerting.

ADDITIONAL PROJECTS

DoctlySuite Jan 2026

- Built a comprehensive system for medical professionals ranging from small clinics to full-scale hospitals.
- Implemented using Laravel, React, and Inertia.js with integrated AI-driven features.

- Designed scalable architecture for patient management, workflows, and clinical operations.

Atrial Fibrillation Detection Research Article

Sep 2024

- Built a machine learning system for early AFib detection using ECG waveform signals.
- Utilized signal preprocessing, filtering, and ML classification techniques.
- Work accepted for presentation at ICSCDS 2025 (International Conference on Smart Computing and Data Science).
