SUMMARY

Full-stack software engineer with a strong focus on backend architecture, scalable SaaS platforms, and modern AI integrations. Experienced in building production-grade applications using Laravel, React, and TypeScript, with hands-on expertise in agentic AI systems, LLM tooling, and cloud infrastructure. Passionate about clean architecture, performance engineering, and shipping software that solves real problems.

EDUCATION

B.Tech in Computer Science Engineering (AI and Robotics Specialization) Jul 2025
Vellore Institute of Technology, Chennai, Tamil Nadu CGPA: 8.24

Intermediate (TSBIE) Jul 2019
Sri Chaitanya Junior College, Hyderabad, Telangana Percentage: 79.7
Coursework: Physics, Chemistry, Mathematics (PCM)

Secondary School (CBSE) 2017
D.A.V. Public School, R.K. Puram, Hyderabad CGPA: 9.8

TECHNICAL SKILLS

Backend: PHP, Laravel, Node.js, REST APIs, WebSockets

Frontend: JavaScript, TypeScript, React.js, Inertia.js, Tailwind CSS, HTML5/CSS3

Databases: MySQL, PostgreSQL, Firebase, ChromaDB, MariaDB

AI & ML: LangChain, LangGraph, LangSmith, Laravel AI SDK, Generative AI, LLM Orchestration, Vector RAG

DevOps & Tools: Git, Docker, Linux, Postman, CI/CD

Cloud: AWS, Microsoft Azure, GCP

Certifications: Azure AI Fundamentals (2024), GCP ML Fundamentals (2022), SFPC (2023), MySQL for BI (Udemy), IIT Bombay (Python, Java, C++)

EXPERIENCE

Full Stack Developer Aug 2025 – Present
Soraxus Pvt Ltd, British Columbia, Canada (Remote)

- Led the integration of AI capabilities into an internal HR SaaS platform, architecting an agentic AI subsystem spanning 19 domain-specific handlers covering leave management, payroll, onboarding, compliance, and workforce analytics.
- Implemented multi-step AI workflows using LangChain and LangGraph, enabling context-aware, tool-augmented responses and reducing manual HR query resolution time by over 60%.
- Integrated LangSmith for LLM observability, tracing, and prompt debugging across production pipelines, significantly improving iteration speed and output reliability.
- Used the Laravel AI SDK to build streaming AI endpoints with WebSocket delivery via

Laravel Reverb, achieving real-time response UX across the platform.

- Designed a credit-based AI usage system with Spatie permissions-based scoping, supporting multi-tenant access control and fine-grained feature gating.
- Refactored core backend services to eliminate N+1 query patterns and improve API response times, contributing to measurable reductions in infrastructure costs.

Data Science Intern

Nov 2023

JPMC, Hyderabad

- Performed exploratory data analysis on financial portfolio datasets to study correlations and risk exposure patterns.
- Developed Python and R-based analysis workflows to automate reporting and improve signal extraction from structured datasets.
- Improved the internal data processing pipeline and standardized reporting formats across the team.

Data Analytics Trainee

Aug 2023

MedTourEasy, Remote

- Completed a 4-week industrial traineeship focused on data analytics, preprocessing, and data-driven decision making.
- Performed exploratory data analysis and cleaned structured datasets using Python, MySQL, Pandas, NumPy, and Scikit-learn.
- Created visual reports and trend analysis dashboards using Matplotlib and Seaborn for effective data interpretation.

PROJECTS

KDE AI Chat — Native KDE Plasma AI Plasmoid

May 2026

store.kde.org/p/2360152

- Built and published a native AI chat widget (plasmoid) for KDE Plasma 6 and Qt 6, available on the official KDE Store with a live user base.
- Implemented SSE streaming for real-time token delivery, KWallet integration for secure API key storage, and full Wayland/X11 clipboard support.
- Architected the widget using KConfigXT for persistent settings management, supporting multiple LLM providers with a configurable, low-latency interface.

Kodachi — Personal AI Infrastructure Stack

Mar 2026

- Built a self-hosted AI assistant ecosystem featuring a LiteLLM proxy unifying NVIDIA NIM and OpenRouter, a mem0 memory layer with ChromaDB vector store, and MCP server integrations for tool-augmented workflows.
- Developed a Discord and Telegram bot bridging an opencode-based AI coding assistant with a Tailscale-networked 5-node personal cloud.

DoctlySuite — Medical Practice Management Platform

Jan 2026

- Architected a comprehensive clinical management system serving small clinics to full-scale hospitals, built on Laravel, React, and Inertia.js with AI-driven scheduling and documentation features.
- Implemented role-based access control, multi-tenant data isolation, and real-time notifications, handling complex clinical workflows including patient records, billing, and appointment management.

AptlyHR — AI-Powered HR SaaS Platform

Dec 2025

- Designed and built a production-grade HR SaaS platform using Laravel 12, PHP 8.4, MariaDB, and React/TypeScript with Inertia.js for a seamless SPA experience.
- Engineered a modular AI subsystem with 19 domain handlers, MySQL vector-native RAG, slash-command autocomplete, and credit-based usage metering with multi-tenant permission scoping.
- Implemented full-stack WebSocket streaming via Laravel Reverb for real-time AI response delivery and live HR event feeds.

Atrial Fibrillation Detection — Research Publication

Sep 2024

- Built an ML system for early AFib detection using ECG waveform signals with signal pre-processing, filtering, and classification techniques.
- Work accepted for presentation at ICSCDS 2025 (International Conference on Smart Computing and Data Science).

SOFT SKILLS

- Approaches complex problems methodically, breaking ambiguous requirements into actionable engineering decisions.
- Takes full ownership of work from design through delivery, without needing oversight to stay unblocked.
- Communicates technical concepts clearly to both engineers and non-technical stakeholders, with a habit of writing precise documentation.
- Picks up new languages, frameworks, and domains quickly — has shipped production software across backend, frontend, AI systems, and native desktop in parallel.
- Works effectively under pressure and shifting priorities, maintaining output quality without cutting corners on fundamentals.
