EDUCATION

B.Tech CSE — AI & Robotics, Vellore Institute of Technology

CGPA: 8.24 2025

EXPERIENCE

Full Stack Developer — Soraxus Pvt Ltd, British Columbia, Canada (Remote)

Aug 2025 – Present

- Architected an agentic AI subsystem for an HR SaaS platform using LangChain and LangGraph, covering 19 domain handlers across payroll, leave, onboarding, and compliance; reduced manual query resolution by 60%.
- Integrated LangSmith for LLM observability and built streaming AI endpoints via Laravel AI SDK delivered over Laravel Reverb WebSockets.
- Designed a credit-based multi-tenant AI usage system with Spatie permission scoping; eliminated N+1 patterns across core backend services.

Data Science Intern — JPMC, Hyderabad

Nov 2023

- Built Python/R analysis workflows for financial portfolio datasets; standardized internal data pipelines and reporting formats.

Data Analytics Trainee — MedTourEasy, Remote

Aug 2023

- Cleaned and analyzed biomedical datasets using Pandas, NumPy, Scikit-learn; delivered visual dashboards with Matplotlib and Seaborn.
-

PROJECTS

KDE AI Chat — Native KDE Plasma 6 AI Plasmoid

May 2026

store.kde.org/p/2360152

- Published on the official KDE Store; built in QML/Qt 6 with SSE streaming, KWallet secure key storage, KConfigXT settings persistence, and multi-provider LLM support across Wayland and X11.

Kodachi — Personal AI Infrastructure Stack

Mar 2026

- Self-hosted AI ecosystem: LiteLLM proxy over NVIDIA NIM/OpenRouter, mem0 + ChromaDB memory layer, MCP server integrations, Discord/Telegram bots over a 5-node Tailscale cloud.

DoctlySuite — Medical Practice Management Platform

Jan 2026

- Multi-tenant clinical system (Laravel, React, Inertia.js, Laravel AI SDK) covering patient records, billing, and AI-driven workflow automation from small clinics to hospitals.

AptlyHR — AI-Powered HR SaaS

Dec 2025

- Production HR platform (Laravel 12, PHP 8.4, MariaDB, React/TypeScript) with a 19-handler AI subsystem built on LangChain, LangGraph, and Laravel AI SDK, featuring vector RAG, WebSocket streaming, and slash-command autocomplete.

Atrial Fibrillation Detection — Research Publication

Sep 2024

- Built an ECG classification pipeline in Python using TensorFlow and Scikit-learn; applied bandpass filtering, R-peak detection, and feature extraction on PhysioNet waveform data to classify AFib with high sensitivity; accepted at ICSCDS 2025.
-

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, Go, SQL, C++, Java, QML

Frameworks & Runtime: Laravel, React, Inertia.js, Node.js, Qt 6, Tailwind CSS

AI & LLM: LangChain, LangGraph, LangSmith, Laravel AI SDK, MCP, RAG, Vector Embeddings, LLM Orchestration, AI Agents, Prompt Engineering

ML & Data: Scikit-learn, TensorFlow, Pandas, NumPy, Signal Processing, Feature Engineering

Databases: MySQL, MariaDB, PostgreSQL, ChromaDB, Firebase

Cloud & DevOps: AWS, GCP, Azure, Docker, Linux, Git, CI/CD, WebSockets

Certifications: Azure AI Fundamentals (2024) — GCP ML Fundamentals (2022) — IIT Bombay — Python, Java, C++
